

LatheCity  
Safely Working with Benchtap Systems IV

**Volume 4 – Tabletop Milling**

ISBN-10: 0985136057

ISBN-13: 978-0-9851360-5-5

## Featured Milling Machines:

P/N 3050/3053 – Sherline’s mill column attached to their lathes

P/N 5000/5100 – typical mill table from Sherline

G0720R – Grizzly heavy-duty bench top mill

Bridgeport mill – a few notes and images of full size mills

I focus on the cheapest and perhaps most widely used Sherline mill which is their mill attachment to their lathes. **However, independent of which tabletop mill you may have, milling operations are basically identical on all milling machines.** In addition, notes about and images of full-size systems (Bridgeport) and descriptions of a typical Sherline mill table are also included.

**G** Furthermore, Grizzly’s heavy-duty bench top mill, G0720R, is featured which is perhaps among the largest table top mills presently available. However, I basically just started to work on that mill when finishing up this book. Therefore, don’t expect too much here.

**I do focus on the Sherline system in this book.**
